CORE SKILLS

Javascript ♦ React ♦ Node ♦ MySQL ♦ Docker ♦ Kubernetes ♦ Terraform

WORK EXPERIENCE

[Enxsys](#)

[07/2023 - 08/2024]

Software Engineer

- Designed and developed core FMS platform from scratch, handling multi-portal workflows (Admin, Client, Vendor, Employee) and achieving \$8K/month efficiency gains by automating invoice-to-expense processing and boosting PEX card utilization.
- Implemented PEX card payment integration (settled/declined/pending flows) and a generic SMS system with dynamic templates, reducing third-party dependency by 40% and enhancing communication reliability.
- Led infrastructure automation with Terraform (Node.js + AWS Lambda scheduling), cutting manual DevOps overhead by 30% and ensuring scalable deployments.
- Migrated legacy monolith to Domain-Driven Design with React + Redux-Saga frontend and Go-based blockchain modules, improving maintainability and scalability across projects.
- Engineered a Git-like version-tracking system for application logic, boosting developer collaboration and reducing merge conflicts by 25%.

[Techdots. Ltd](#)

[01/2022 - 07/2023]

Software Engineer

- Designed and deployed **containerized microservices** (Node.js, Python, AWS Lambda) with CI/CD pipelines, cutting release cycles by **40%**.
- Built **scalable database schemas** from scratch and optimized query performance by **90%** (8s → <1s) for **1M+ products** using raw queries + metasearch indexing.
- Developed **React.js/Next.js frontends** for SEO-rich product pages, improving site traffic and engagement by **30%**.
- Implemented **secure session-based authentication & Stripe payments**, enabling seamless user authorization and transaction handling.
- Automated system workflows with **cron jobs and serverless functions**, reducing manual interventions by **60%**.

[Devigital-Systems](#)

[01/2021 - 01/2022]

Software Engineer

- Built **REST API microservices** (NestJS + Postgres) from scratch, improving backend scalability and reliability by **30%**.
- Enhanced **React frontends** with generic components, infinite-scroll, and virtual-scroll features, boosting load performance by **40%** for large datasets.

- Integrated **GitHub, Slack & Trello APIs via OAuth**, streamlining team collaboration and saving **5+ hours/week** in manual workflows.
 - Implemented **Sentry monitoring + GitHub Actions CI/CD**, reducing bug resolution time by **25%** and enabling automated test pipelines.
 - Delivered the **Devigital website** end-to-end (React, Node, Sentry), achieving **99.9% uptime** and faster feature rollout.
-

PROJECTS

Lambda API Gateway + AMQ in Go with Terraform

- Built an **event-driven system** using AWS Lambda, API Gateway, and ActiveMQ, fully provisioned via Terraform.
- Implemented **Go-based microservices** for high-throughput message publishing and consumption.
- Automated infra setup with Terraform, reducing deployment/config time by **70%**.

Event Test AWS

- Designed a **producer-consumer architecture** for handling events in Node.js.
 - Integrated **Dockerized services** with Kubernetes deployment for scalability.
 - Set up **GitHub Actions CI/CD**, ensuring continuous testing and cloud deployment.
 - Created **Terraform modules** to provision resources.
-

Language

English - Fluent.

EDUCATION

- Masters in Computer Science [Jan 2025 - Feb 2026] [University of Ulster, London](#)
